

## WHEEL WASHES

Highly  
recommended

## Albatros Jetwash – the Austrian market leader

### Albatros – highly recommended

A recommendation involves the acceptance of personal responsibility for the performance of a third party and is thus the highest recognition that a customer can award to a supplier. This fact makes us proud, as since its foundation Albatros' existence and growth have derived exclusively from recommendations. We would like to take this opportunity to thank all our well-wishers and promise that we will continue to never disappoint.

### Experience, experience, experience

Theoretical know-how is one thing, practical experience another. Only those that possess both can provide customers with the secure feeling that they have taken the right decision regarding a contractual allocation.

### Reduced energy and water consumption

Albatros is an innovative machinery design and production company with a policy of ongoing product range development. This is because success throughout Europe is dependent upon the provision of technology that conserves both energy and resources.

### Jetwash Spezial – setting new standards

Your wish is our command. We are equipped for any challenge and look forward to fulfilling your special needs with lengths of 4-10 m, various widths, and optional water treatment and automatic dirt removal.

## Jetwash – roller system

### JW spezial 1

Small, but great! This 2-roller/1-axis solution is most inexpensive and therefore represents an excellent investment for construction sites, small mining enterprises and landfills.

- Roller system
- Stationary and semi-mobile operation possible
- Two rollers clean the wheels on one axle
- For low numbers of trucks with sticky or dirty wheels

### JW spezial 2

Double performance! 4-roller/2-axes technology reduces the washing time needed for each truck and has proved to be ideal for larger operations with higher vehicle frequencies.

- Roller system
- Customer-built concrete basin
- Four rollers clean the wheels on two axles simultaneously
- For up to 300 trucks with extremely dirty or sticky wheels

# Jetwash – the perfect basis for your customised solution

## JW express stationary

Ideal for gravel pits and landfills. Wheels with low- to medium dirt loads are speedily washed while quite literally passing.

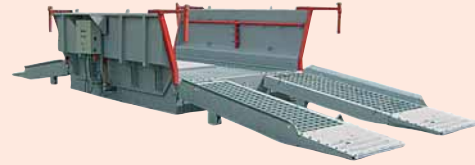

- Drive-through wash
- Customer-built concrete basin
- Water treatment

## JW express semi-mobil

The Jetwash express semi-mobile is simply embedded in gravel and achieves ROI in just one year of operation (e.g. on tunnelling sites).

- Drive-through wash for wheels with low- to medium dirt loads
- No concreting work required
- Rapid assembly and disassembly

## JW express mobil

In the computer branch, one would use the term "plug & play". In the wheel wash business this adds up to delivery, installation and start-up.

- Drive-through wash for wheels with low- to medium dirt loads
- Free-standing, no water treatment
- Low truck numbers

## JW express supermobil

The luxury model among the mobile units is ready to wash only an hour after delivery and is ideally suited for short-term operations.

- Drive-through wash for wheels with low- to medium dirt loads
- Free-standing water treatment unit (optional, automatic dirt removal)
- Large truck numbers

# Albatros Engineering GmbH

## The construction and purpose-built machinery specialist

### Jetwash wheel washes

This Albatross brand product is ideal for both standard and customised solutions. Differing lengths (4-10 m) and widths are available to fulfil every requirement. Roller and drive-through washes in a diversity of mobile versions (ready to use within an hour) are also available and can be fitted with optional, automatic dirt removal.

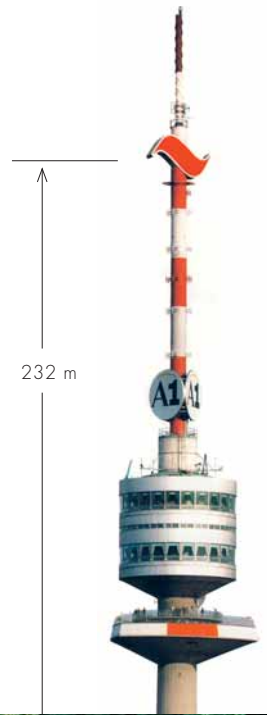

### Construction machinery for special civil works and tunnelling

### Specialist machinery

Albatros fans have every reason to be proud. Albatros installed the revolving Bank Austria symbol on top of the Donau Tower in Vienna, which made it into the Guinness Book of Records. Moreover, the specialists from Linz in Upper Austria also showed their special class with the modernisation of the "Schlossbergbahn" in Graz and the assembly lines for the Airbus A 380, to name but two of their many challenging projects.

### Winches and inspection platforms

- New power plant construction, inspection and rehabilitation
- Heavy load and passenger transport winches with multilayer winding
- Planning, delivery, installation, acceptance, official dealings
- Electro-hydraulic or electrically powered
- Cable car ropeway system updates
